

Hurricane Ivan Wind Distribution

Landfall Plus About **24** Hours

**For Official
Use Only!**

Most Probable Post-Landfall Wind Distribution

This hurricane scenario is based on a Category 3 storm making landfall in near proximity to Gulf Shores, AL. A small polygon of Category 4 wind was added for the barrier islands in proximity to the eyewall landfall.

Information provided on this page displays the most probable hurricane track based on information from the National Hurricane Center (NHC). These projections are based on information from the NHC **(0500 EDT 09/17/2004)** historic path.

Details about this model may be obtained at
<https://englink.usace.army.mil>
 or contact ENGLink at 1-877-936-4546

Hurricane Ivan Debris Model

Landfall Plus About **24** Hours

**For Official
Use Only!**

Most Probable Landfall Debris Model Results

Alabama - 9,590,000 yd³

Florida - 9,402,000 yd³

Mississippi - 549,000 yd³

*Model results per county on
following page*

This hurricane scenario is
based on a Category 3 storm
making landfall in near
proximity to Gulf Shores, AL

Information provided on this page displays the most probable hurricane track based on information from the National Hurricane Center (NHC). These projections are based on information from the NHC **(0500 EDT 09/17/2004) historic path**.

The amount of debris forecasted is possible total volume, not necessarily the volume that may need to be removed with Federal funds.

Details about this model may be obtained at <https://englink.usace.army.mil>
or contact ENGLink at 1-877-936-4546

Hurricane Ivan Ice Model

Landfall Plus About **24** Hours

**For Official
Use Only!**

Most Probable Landfall Ice Model Results

Alabama -1,777,000 pounds
Florida - 1,505,000 pounds
Mississippi - 58,000 pounds

*Model results per county on
following page*

This hurricane scenario is
based on a Category 3 storm
making landfall in near
proximity to Gulf Shores, AL

Information provided on this page displays the most probable hurricane track based on information from the National Hurricane Center (NHC). These projections are based on information from the NHC **(0500 EDT 09/17/2004)** historic path. The intensity of this hurricane has been altered to complete model runs.

The amount of ice forecasted is based on Mission Guide Book requirements (8 pounds per day per person) and Ice SME input and represents a first day daily need.

Details about this model may be obtained at

<https://englink.usace.army.mil>

or contact ENGLink at 1-877-936-4546

Most Probable Landfall Temporary Roofing Model Results

**Alabama - 11,500
Florida - 10,500
Mississippi - 300**

*Model results per county on
following page*

**This hurricane scenario is
based on Category 3 storm
making landfall in near
proximity to Mobile, AL.**

Information provided on this page displays the most probable hurricane track based on information from the National Hurricane Center (NHC). These projections are based on information from the NHC **(0500EDT 9/17/2004)** historic path.

The amount of temporary roofing that may be required is based on no roofing need in CAT 1 wind areas, 3% of housing units damaged in CAT 2 wind areas, 8% of housing units damaged in CAT 3 wind areas, and 12% of housing units damaged in CAT 4 wind areas. This only indicates possible need - not necessarily a mission to repair roofs.
